

## **Hospitalization Communication Guide for Individuals Who are Blind, Low Vision or DeafBlind**

Currently, many hospitals are seeing a large number of patients and often cannot provide the same services you normally expect. Many hospitals will not allow in-person interpreters, family members, or visitors to come into the hospital. You may be alone for a long time when you are in the hospital. Doctors and nurses in hospitals wear masks and gloves and may talk to you from behind a window or curtain, so it may be harder for you to understand them.

Below are some helpful ideas to help you prepare.

Put together an emergency bag with items you need. Label the bag and items with your name. Leave space on the label to add your hospital room number. Add a Braille label or bump dot to distinguish it as yours. The emergency bag might include:

- Your primary assistive technology devices (Magnifier, Laptop, Notetaker)
- A backup assistive technology (e.g. slate and stylus, raised line paper)
- Download free apps such as Seeing AI (to scan and read hospital documents), Be Specular (to be aware of your surroundings), VRI apps (for your Relay calls), or BARD Mobile (for news and reading), Notes or AudioNote (to record and playback healthcare worked instructions).
- Plugs and chargers
- A cellular hotspot in case the hospital does not have Wi-Fi or it is not working well.
- An extension cord or power strip in case your bed is far from the outlet.
- Extra batteries for your assistive devices
- A Ziploc-type bag to put your tablet or smartphone in. It will allow you to still operate the touchscreen through the plastic while protecting your device.
- A copy of your advance medical directive, if you have one. You can find more information and instructions to make an advance directive on [AARP's website](#)
- Emergency contact information for family members or friends

Disinfect your devices and related items, they can transmit viruses and bacteria. There are valid infection control issues for why a hospital might not let you bring a device, tablet or cell phone into an ICU or other medical environment. Devices, however, can be effectively disinfected without damage to the device. Explore this video [How to Clean Your Smart Phone and Tablet](#) or ask the hospital infection control officer or specialist for help, if needed.

Document your need for assistive technology to communicate. Upon arrival, the hospital staff or emergency room medical team needs to know how you communicate. Consider preparing a printed page saying you are Blind, Low Vision or DeafBlind and need hospital staff to communicate with you differently.

Wear gloves and require interpreter to wear gloves when doing Tactile Sign or Print on Palm.

If the hospital staff refuses to talk with you or respect your wishes, ask for an “ethics consultation.”

If you have a service animal, you may need to decide if it is essential and speak with the hospital about allowing it to remain with you.

It is likely that if you are admitted you will be alone and will not have anyone with you who understands your communication needs. Preparing now is important!

The information sheet here can help prepare. Also, the Oregon Assistive Technology Staff are available to answer your questions about being prepared for a hospitalization.
