

## Hiring In-Home Services or Repairs During the Time of COVID-19

The Centers for Disease Control and Prevention (CDC), offers the following tips for staying safe and slowing the spread of COVID-19 while scheduling services or repairs inside your home. These services may include installation and repair of plumbing, electrical, heating, or air conditioning systems; painting; cleaning services; and even setup, installation, and training of your assistive technology devices with our Assistive Technology Specialists.

It is important to remember, that in general, the closer and longer you interact with others, the higher the risk of COVID-19 spreading. Therefore, limiting close face-to-face contact and staying at least 6 feet away from other people is the best way to reduce the risk of COVID-19 infection, along with wearing masks and practicing everyday preventive actions. Before welcoming service providers into your home, consider the following tips to help keep you, your family, and the service provider safe during your in-home services or repairs:

## The Unexpected

The media and the medical community often promote the wonders of a healthy, active lifestyle at any age. And even though the “golden years” may bring some physical changes, most people—young and old—have come to expect they will live long, healthy and unencumbered lives. Consequently, when you or someone you love is faced with a disabling illness or injury, you are taken by surprise. Having to deal with a disability is not something most people anticipate.

When people realize that a disability, their own or a loved one’s, is going to be permanent, they may express a variety of reactions from shock to fear to grief to anger. There is no “right” way to respond. People generally react according to what the disability means to them and just how much it is going to affect or change their lives. Generally speaking, those who accept and make adjustments for their new lifestyle will have an easier time coping. If you’ve developed a disability, acknowledge your limitations, and as you concentrate on what you can do, turn to Access Technologies, Inc. for information on simple, easy to use devices that will allow you to accomplish even more. Here are few examples that may assist you.

Reacher/grabbers are great accommodations if you have a bad back, have had knee or hip surgery and can’t bend, or if you have limited mobility, picking up things you’ve dropped can be a painful task. If you have a bad neck that hates tilting up and down, overreaching to get cans off that high shelf can be a real issue.

Magnification devices are available in a variety of sizes and magnification levels. Handheld magnifiers are designed for quick spot reading, like when you are trying to read the care label of your new blouse, adjust the thermostat, or read the menu at

your favorite restaurant. While electronic vision aids are great for reading your favorite novel or completing a crossword puzzle.

Transport chairs are great when you experience difficulties walking through the store, into the doctor’s office, or just for a stroll in the neighborhood with a loved one. Look for a lightweight model, that folds easily for stowing in your vehicle.

(Hiring - continued from page 1)

### Before the Visit:

Do as much of the pre-service consultation as possible before the service provider arrives.

- Check with your local health department to see if there is a stay-at-home order in your state or local community that restricts non-essential activities or services. If a stay-at-home order is in effect in your community, consider if the service request is essential or if it can be delayed.
- If you or someone in your home has COVID-19, symptoms consistent with COVID-19, or has been in close contact with someone who has COVID-19, wait to schedule non-emergency services that require entry into your home until it is safe to be around others.
- Do as much of the pre-service consultation as possible before the service provider arrives, to reduce the amount of time the service provider spends inside your home. For example, discuss the details of the service request on the phone or by email, and send pictures ahead time.
- Discuss any COVID-19 precautions the service provider is taking, including the use of masks for the duration of the service visit, any pre-screening procedures (such as temperature checks) and using the restroom during the service call.

### During the Visit:

- Do not allow service providers to enter your home if they seem sick or are showing symptoms of COVID-19.
- Ask the service provider to wear a mask *before* entering your home and during the service visit. Also, you and other household members should wear a mask. Consider having clean, spare masks to offer to service providers if their mask becomes wet, contaminated or otherwise soiled during the service call.
- Avoid physical greetings, for example, handshakes.
- Minimize indoor conversations. All conversations with the service providers should take place outdoors, when possible, and physically distanced indoors, if necessary.
- Maintain a distance of at least 6 feet from the service provider, and limit interactions between the service provider and other household members and pets.

*Ask the service provider to wear a mask before entering your home*

During indoor services, take steps to maximize ventilation inside the home, such as turning on the air conditioner or opening windows in the area.

### After the Visit:

- If possible, use touchless payment options or pay over the phone to avoid touching money, a card, or a keypad. If you must handle money, a card or use a keypad, wash your hands with soap and water for at least 20 seconds or use hand sanitizer with at least 60% alcohol after paying.
- After the service is completed, clean and disinfect any surfaces in your home that may have been touched by the service provider.

### (The Unexpected - continued from page 2)

Transport chairs are great on occasions when you experience difficulties walking through the store, into the doctor's office, or just for a stroll in the neighborhood with a loved one. Look for a lightweight model, that folds easily for stowing in your vehicle.

Portable ramps are wonderful accommodations for individuals who use any type of mobility aid such as a walker, wheelchair, knee scooter, or simply find those steps into the home painful to the knees, back or hips.

Alerts and Signalers are great when our ears don't work so well, and we may not know when the telephone is ringing, or someone is knocking at the door.

There are a variety of adaptive eating utensils, dinnerware, and meal prep aids designed to assist individuals with tremors, limited grip or range of motion. Examples include utensils with built up handles, rocker knives, weighted utensils, the popular Liftware Steady, partitioned dishes, double spatulas, and the Kitchen Rollabout.

We understand a disability often requires changes in how a person lives, works, travels, or spends their free time. If you are unsure where to start, call Access Technologies, Inc. Our AT Specialists are available to talk with you and demonstrate simple technologies that can make this new part of life a little easier. Did you know ATI has a device lending library where you can try out devices before making a purchase? Give us a call at 503-361-1201.
